Test Results: Genotype of your dog is Normal/Clear

Risk for developing prod PRA: This dog will never develop the prod form of PRA (progressive rod-cone degeneration form) of Progressive Retinal Atrophy. So far, the only inherited PRA disease known in dogs of your breed is the prod form of PRA.

Significance for breeding: Genetically Normal/Clear dogs can be bred to any dog and will produce no pups affected with the prod form of PRA.

This interpretation is based on the test result of the DNA test for the specific mutation identified as causing the prod form of PRA in Labrador Retrievers as of the date on this report.

For further information, please consult the OptiGen website at www.optigen.com.

International DNA Based Genetic Database: To register this result with IDA, make a copy, sign below, and WITH FILE, to OGA, 530 E. Nolene Blvd, Columbia, MO 65201, 3406 or FAX to 617-875-9073, www.oga.org

I hereby certify that the sample submitted was of the animal described on this application. I authorize the OGA to release all information on the test results thus placing the results in the public domain and I hereby release OGA from any and all liability associated with the release of test information.
